December 22, 2006

Dear Mike,

Nitrothermspray is everything you said the product would be and a little more. As you know, Fontaine Modification Center in Dublin Virginia put the Nitrothermspray system through its paces during the period of Oct. 17, 2006 thru Dec. 1st, 2006.

Fontaine utilized a J-40 and Top Spray unit in our line production during the above mentioned time frame. We painted, on the average, 27 truck cabs per day during this time frame. The cabs consisted of the cab, hoods, air deflectors, bumpers and other associated components. Listed below are 3 major areas that the Nitrothermspray system improved our production thru-put and material cost:

- 1.) Materials Savings – During our start up of the Nitrothermspray test, Fontaine immediately noticed a savings in paint. There was a significant difference in how the material laid down as well as, a reduction in overspray. This allowed us to maintain our specified mil thickness while consuming 20% less material.
- 2.) Quality Control – Something we had not considered before the test, but is very important, is the way the system helps to “de-skill” the painting function. The system helped our less skilled and newer painters to paint like our veterans, resulting in improved overall consistency of quality.
- 3.) Time Savings – During the Nitrothermspray test we reduced our overall time to process a cab through our paint system. We were able to reduce our bake times by utilizing the heat of the Nitrothermspray system, thus increasing our production rate.

We have always tried to keep State of the Art Technology and with the Nitrothermspray system, we have found it.

Yours Truly

Paul Kokalis
